

AMENDMENTS TO THE SPECIFICATION:

**Page 1, line 19 to page 2, line 6, amend the paragraph as:**

Because of the evacuated state between planar glass sheets and the atmospherical pressure effect on the outer surface of a planar glass sheet, it is possible to cause opposite deformation of planar glass sheets in the evacuated glass panel and even fracture of the glass sheets. Therefore, during the manufacturing process of evacuated glass panels, a plurality of support means to be disposed between planar glass sheets are always used. The distribution of the disposed support means has to be as uniform as possible so as to resist the atmospherical pressure on planar glass sheets, and thus maintain the shape of the planar glass sheet avoid being easily deformed and ruptured.
